

### Good news: Effective Syntax [2]

[1] W. Fan, F. Geerts, Y. Cao, T. Deng, P. Lu: Querying Big Data by Accessing Small Data, PODS 2015

- Input: A Query Q and an access schema A
- Question: Is Q boundedly evaluable with

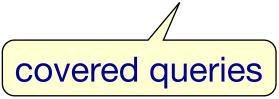

# **Bounded Evaluability**

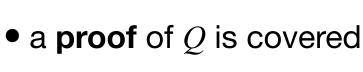

# No matter how desirable, the problem is hard [1] Undecidable for first-order logic (relational algebra) queries

EXPSPACE-hard for conjunctive queries (SPC queries)

#### **bounded plan** for $Q^{[3]}$

### Reducing undecidable to PTIME without loosing expressive power up to equivalence

[2] Y. Cao, W. Fan: An Effective Syntax for Bounded Relational Queries, SIGMOD 2016

• FO Q is bounded iff  $Q \equiv Q'$  and Q' is covered • PTIME to check whether Q is covered

[3] Y. Cao, W. Fan, W. Yu: Bounded Conjunctive Queries, VLDB 2014

## **Bounded Evaluability**

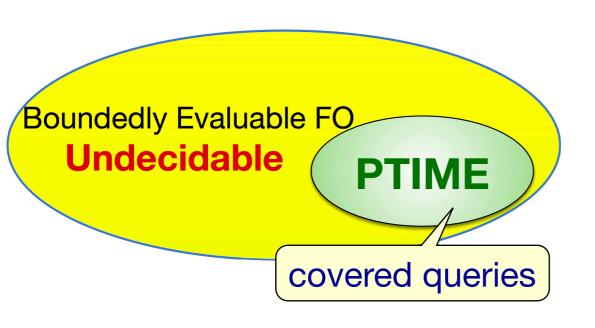

a set of access constraints

- Input: A Query Q and an access schema A
- Question: Is Q boundedly evaluable with A

No matter how desirable, the problem is hard [1]

- Undecidable for first-order logic (relational algebra) queries
- EXPSPACE-hard for conjunctive queries (SPC queries)

### Good news: Effective Syntax [2]

- FO Q is bounded iff  $Q \equiv Q'$  and Q' is covered
- PTIME to check whether Q is covered
   Reducing undecidable to PTIME without loosing expressive power up to equivalence
- a **proof** of Q is covered bounded plan for  $Q^{[3]}$

### **Effectiveness of Bounded Evaluation**

### Huawei query workload

Query Type	Query Number	<b>Original Complexity</b>	Accelerate Ratio
Bounded query without join	2	Low	Medium
Simple aggregate query without join	2	Low	Medium
Join on key attributes	4	Medium	Low
Join on non-key attributes	3	High	High
Unbounded Query	2	-	-

### Performance comparison with DBMS

	Bounded non-join	Aggregate non-join	Join on Key	Join on non-key	ı
Query count:		2	4	2	
PostgreSQL:	$1.58  \sec$	$7.53  \sec$	$629.96~{ m sec}$	> 3 hours	
BEAS:	$0.01~{ m sec}$	$0.02~{ m sec}$	$15.14  \sec$	$0.04~{ m sec}$	ı
Accelerate ratio:	158	376.5	41.61	$> 10^5$
